

EMPLOYEE SUCCESS STORY

Maury Cairnes
PCB Designer

Maury Cairnes joined Quantic Wenzel in September 2004 after working in manufacturing and test at Andrew Corporation, bringing with him a strong background in electronics and practical problem-solving. As a Printed Circuit Board Designer, he turns engineer inputs and customer specifications into detailed circuit board layouts that enable mission-critical RF and microwave systems. Over the years, he's benefited from working alongside mentors like Fran, Greg, and Paul, whose guidance has helped him refine his skills and grow within the company. Among his many projects, Maury finds space applications the most rewarding, knowing his designs contribute to systems that operate far beyond Earth. Outside of work, he recently celebrated his son's high school graduation and plans for trade school in automotive studies. Life at home is lively, with three cats (Grace, Lillian, and Blue), a guinea pig named Izabelle G. Pig, and a small herd of Nigerian Dwarf Goats he raises himself! He spends his free time hunting, fishing, and growing hot peppers, and dreams of hunting caribou in the Canadian wilderness someday. A fan of noodles in any form, Maury brings the same care and attention to his cooking and hobbies as he does to his designs. After more than two decades at Quantic Wenzel, he remains a very important member of the team, known for his expertise, kindness, and pride in creating high-quality work that stands the test of time.

“*Quantic Wenzel has given me the chance to take on meaningful projects and grow my skills. The company encourages learning, and working alongside talented mentors has made every challenge a chance to improve and do my best work.*

-Maury Cairnes
