

Quantic™ Wenzel

EMPLOYEE SUCCESS STORY

Minh Vo
Electronics Technician II

Minh started his career with Quantic Wenzel in June 1992 as an electronics assembler, helping manufacture frequency sources and components for our customers' mission-critical applications. Over the years Minh never passed up opportunities to work on new, complex projects and next-generation technologies. With the support and mentorship he received from company leadership, he was promoted to a senior electronics technician role. Today, Minh pays it forward by passing the technical knowledge and skills he has learned to the next generation of assemblers, technicians and manufacturing professionals. Everyone on the Quantic Wenzel team agrees that Minh is an outstanding colleague with a kind and uplifting spirit. Outside of work Minh is an avid gardener, growing a variety of vegetables and flowers to share with his close friends and family.

The company puts its people first and presents opportunities for staff to develop across a range of career paths. The support I've received over the years has allowed me to build a long and successful career, for which I am so very thankful!
